Friedrich Georg : Hitler's Miracle Weapons: The Secret History of the Rockets and Flying Crafts of the Third Reich: Volume 2: From the V-1 to the A-9; Unconventional short- and medium-range weapons before purchasing it in order to gage whether or not it would be worth my time, and all praised Hitler's Miracle Weapons: The Secret History of the Rockets and Flying Crafts of the Third Reich: Volume 2: From the V-1 to the A-9; Unconventional short- and medium-range weapons:

2 of 2 people found the following review helpful. Secret History is Right!By Frank RumoreI have been an avid "war buff" all of my life and consider myself to have a good working knowledge of the history of the European theater of

WWII. Therefore I feel qualified to say that Friedrich Georg's 3 Volume "Hitler's Miracle Weapons" represent truly groundbreaking research that turns the accepted view of history upside down. Even the spate of modern History Channel episodes covering the NAZI threat to humanity fail to approach the level of detail covered in these volumes which truly show the allied victory was by a hair's breadth occurring at 5 minutes to midnight. Patton was correct in stating as late as March 1945 that "we can still loose this war". Translated from Georg's original German works into English, these volumes are flawed only in the occasional mis-transliteration common to many such translations, but none that can't be correctly discerned by the surrounding context. 2 of 4 people found the following review helpful. not completely read
By Christopher L. Estes
So far I like what I see. The book is only 1/4 read (I usually jump around a book like this by looking in the table of contents, looking up chapters/sections of immediate interest and read those. Also, the Russian artist is excellent and the illustrations and photos also generate the need to jump around in the book to explore further info of those. The book was way more expensive than the others and I'd like to know why.

By Steven C. Lund
Interesting book.

Following on from the success of volume 1, Friedrich Georg's second book in the series covers unconventional short- and medium-range weapons. In particular, this volume includes a wealth of information about the V-rocket program, not just the more familiar V-1 and V-2, but special variants of these two rockets as well as later experimental craft and weaponry. Following a fascinating examination of prewar efforts to build flying bombs, the author examines the V-1 and V-2 projects in great detail. Particular attention is paid to special variants that have previously received little coverage. These include the V-2 A-4 'America Rocket', and V-2s designed to carry nuclear and radiological warheads. The capability of the Germans to deploy such weapons is also discussed. A large number of weird and wonderful projects that never left the drawing board are examined, including the FR-35, V-6, V-101, Waterfall and Naval EMW A-7 rockets. The fascinating final section examines German plans to utilize such rocketry against London and Paris in 1945, as well as recounting the activities of V-weapons on other fronts, including Italy, Yugoslavia and the Eastern Front. The text is supported by b/w photographs and 16 superb pages of color artwork, including profiles, computer-generated images of designs that never flew, and pictures of the author's own models.
