By James Behtash Finally a book which covers the thought and design process for watch design! I've been searching for such a book for a very long time and came across this gem. Not only is Olivier Gamiette a talented car designer but as I've seen in his book a highly creative timepiece designer. This book provides guidance and structure to my own efforts to designing watches and I find it an invaluable resource and

inspiration. In addition, the presentation is top notch all the way. It's not surprising to see a car designer also produce incredible watch designs as I've always felt the two go hand in hand beautifully. I'm looking forward to the next book!

Epic designs and incredible ideas.

Three years ago, French car designer Olivier Gamiette became fascinated with how watches work and began drawing them in his spare time. He started to educate himself on the different elements that watches possess and how to define their proportions. His goal was to not only draw credible and realistic watches, but also to have them tell time in ways he had never seen before. More than thirty extraordinary concept watch designs later, *SOON Timepiece Phenomena* presents, in both English and French, Gamiette's creations in all their photorealistic glory. Meet *Sentinelle* with its six rotating glass cylinders, the futuristic *Celerity* with horn-like propellers, and *Sublissime* with its mesmerizing crisscrossing bands. Discover these timepieces and the magic each one holds through Gamiette's thoughtful watch descriptions, in-depth design tutorials, and, above all, his conceptual masterpieces.

French car designer Olivier Gamiette has produced a book about his foray into watch design which presents 30+ 3D concept watch ideas. The designs themselves are quite interesting, but also cool is the fact that he gives Photoshop tutorials for the process of creating each one. Does the title of his book indicate that we can expect to see some of these designs realized in the near future...? [A Blog to Watch About the Author](#)  
Olivier Gamiette originally studied to be a mechanical engineer before discovering the world of automotive design. The self-taught artist started his career as a 3D modeling engineer at Peugeot before moving on to become a professional automotive designer there. In his position he works on series models, concept cars, and other design projects.
